

# TRAVINA<sup>®</sup> USA

AN ENGINEERED STONE

## explore the possibilities

Travina<sup>®</sup> is an engineered stone that offers a wide range of product applications for residential and commercial use.

Travina products are versatile, offering such residential applications as kitchen countertops, vanity tops, window sills and fireplace surrounds. Commercial establishments such as hotels, restaurants, schools, offices and healthcare facilities also benefit from Travina's beauty, durability, affordability and antimicrobial properties.

### Cost Effective

Travina was designed to be an affordable alternative to real stone and solid surface products. While offering the beauty and durability of higher-end surfaces, Travina stays within the range of most budgets.

### Anti-Microbial

Travina uses its own protection system which incorporates anti-microbial properties. Testing proves that the anti-microbial protection system falls in the 99% effective range.

### Scratch and Stain Resistant

Travina's unique appearance gives the product better ability to hide surface wear than its competition. Very minor scratches can be removed with a single application of Travina Final Coat, an advanced 5-year sealer. Deeper scratches can be taken care of by using a 400 grit sandpaper followed by Travina Final Coat—this product also protects against common stains. Although Travina is a porous product, neither the aggregate nor the resins are susceptible to staining; however, we caution against treating the surface with some acids, bleaches and citrus products as they can harm the surface.

### Made in the USA

Travina products are manufactured in the U.S. by certified regional suppliers who have completed the Travina process training.

*Travina is composed of 70-80% natural aggregates and a special blend of high tech polymer resin for strength and durability. The result is a surface that combines the best of both worlds—**nature and science in perfect harmony.***

## frequently asked questions

### What is Travina®?

Travina is an engineered stone manufactured with 70-80% natural aggregates and high-tech polymer resin.

### What do the aggregates consist of?

Travina fillers come from a wide variety of natural-based renewable and mined products.

### Why should I choose Travina?

Travina is a value-added product. It is comparable in beauty to real stone, as durable as solid surface products, yet stays within an affordable price range for most budgets.

### How durable is Travina?

Travina is a heat resistant, scratch resistant and stain resistant product. Minor scratches are easy to repair. With the use of Travina Final Coat sealer, the treated surface resists most stains. Although the material can tolerate high heat, we suggest the use of pot holders and trivets.

### What is the best way to clean my Travina products?

Travina is a natural-based composite and must be treated like real stone. Avoid acid-based cleaners and harsh abrasives—most clean-ups are best done with a mild detergent and water.

### Are different colors and designs available?

Travina products are available in several colors and designs. See the dealer for color and design selections.

### How do product samples compare to finished products?

Travina is a natural-based product and will always have color shifts. As in real stone, every part we make is unique, with random veining, particle size and color. Samples only display the general characteristics of a particular color of Travina.

### Can I use Travina in my kitchen?

Travina was designed for normal kitchen environments.

### Can I use Travina in my bathroom?

Yes, if you follow the proper care and maintenance procedures.

### Can Travina be used in outdoor applications?

We currently have Travina being used in several outdoor applications including both commercial and residential.

### Can Travina be made with an integral sink?

No. Currently Travina installations do not have integral sinks.
